

# ECOBOND

PRODUCING CONCRETE USING CARBON DIOXIDE

## UPSCALED - CO<sub>2</sub> Concrete Slabs

We have upscaled our CO<sub>2</sub> Concrete production. With the success of our biosecurity platforms at Hawbesbury Farm, Western Sydney University, we made four 3m x 3m concrete slabs with our CO<sub>2</sub> Concrete. The slabs were cast in March 2019 using our 2 innovative mix designs. The slabs are employed to support gross animal weight (about 1 ton each) for their troughs (drinking stations).

We are looking for Investors, Partners and Network connectors in the sector to publicise this new material.
